TRADINGVIEW USER GUIDE

ATLAS TREND CORE

Read Charts at a Glance · Dual Operation Modes (Conservative & Aggressive) · Step-by-Step Trailing Stops · Single-Alert Setup

2 Modes
Conservative & Aggressive

4 Groups · 14 Inputs
Clean, foolproof menu

Candle-Close Logic
Zero repainting signals

1 Single Alert
Entry, SL price & exit

What exactly does Atlas Trend Core do? Unlike classic indicators that drop BUY/SELL arrows and leave you stranded, Atlas Trend Core filters market conditions, computes exact lot sizing and initial stop distance for your equity and symbol, and shows every stop advance with exact numbers on chart and phone alerts. It never executes live orders; it is your decision-support and stop-management assistant.

Set Up & Start in 5 Minutes (4 Quick Steps)

1. Add to Chart & Pick Mode

TradingView → Indicators → Invite-only scripts → add Atlas Trend Core. Choose `Conservative` (capital protection) or `Aggressive` (wide cloud trend).

2. Enter Account Size & Risk

Fill **Account Size ($)** (e.g. `10000` or `100000`). Keeping Custom Risk % at `0` applies `0.55%` (Conservative) or `1.50%` (Aggressive).

3. Choose View & Theme

Keep default `Guide` panel for mobile/compact desktop, or pick `Detailed` for full metrics. Pick `Light` or `Dark` cloud theme.

4. Connect 1 Alert to Phone

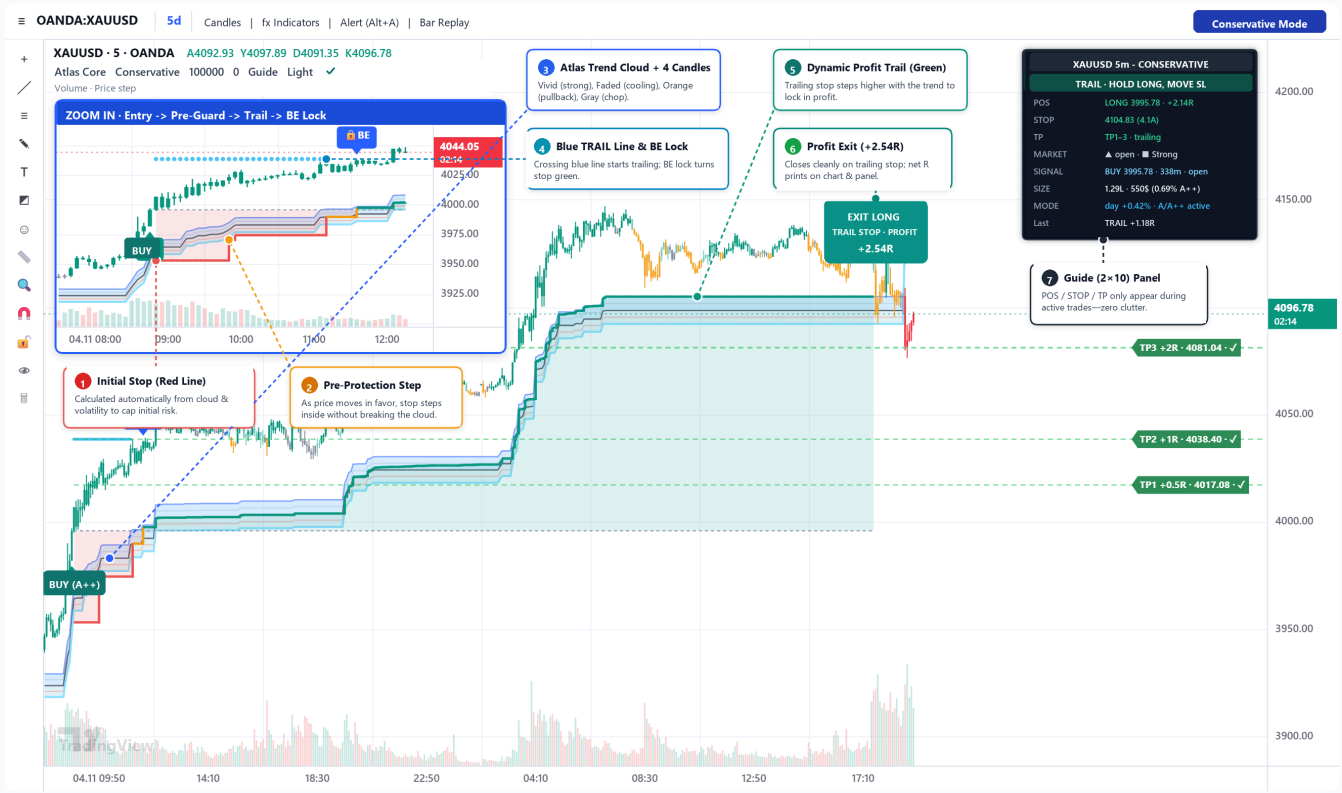
Press `Alt + A`, select **Atlas Trend Core** as Condition and **"Any alert() function call"**. Every entry, SL move, and exit arrives cleanly.

SECTION 1 Upgrading from Older Versions: What Changed & Why

Legacy Feature	Atlas Trend Core Equivalent	Practical Advantage
Many Technical Inputs	**14 Clean Settings in 4 Groups**	Zero risk of breaking internal filters; set only risk & view daily.
Legacy PROP Mode	**Conservative Mode** (-1.5% daily guard)	Removes rigid prop lockouts on personal accounts while keeping daily protection.
Crowded 5×12 Table	**Guide (2×10) / Detailed (2×15)**	Keeps candles unobstructed on mobile; adds dynamic MODE row.
Empty Rows When Flat	**Smart Auto-Hide**	POS / STOP / TP appear only when a setup or open trade exists.
Single Trade Style	**Dual Mode: Conservative vs Aggressive**	Switch between tight protection and broad trend capture cleanly.
Early Breakeven Cuts	**Pre-Guard First, Then Cloud Trail**	Halves initial risk before tight trailing; locks `🔒 BE` once trend settles.
Chasing Climax Bars	**Overextension Wait Filter**	Skips chasing sudden spikes far from cloud; waits for pullback.
Mobile Timeout (RE10110)	**Fast Last-1,500-Bar Engine**	Eliminates mobile timeouts and loads active setups instantly.

> **Single `alert()` Upgrade:** Select `Any alert() function call` once to receive lock-screen messages with exact lot sizes and numbers like `SL MOVE → 3997.49` .

SECTION 2 Chart Anatomy (OANDA:XAUUSD 5m — Light Theme)



Visual 1 — Complete Lifecycle: Entry, Pre-Guard, Trail Line, BE Lock, Profit Exit & Guide Panel

1. Initial Stop (Red)

Confirmed on candle close; next bar opens trade with cloud-structured initial stop.

2. Pre-Protection

Steps inward smoothly as price moves in favor without choking early swing room.

3. Cloud + 4 Candles

Core trend spine paired with 4 momentum candle states (vivid, faded, orange, gray).

4. Blue TRAIL & 🔒 BE

Crossing blue threshold turns stop amber; passing entry triggers 🔒 BE lock.

5–6. Green Profit Trail

Trails locked profit; net `R` score logs automatically upon trailing stop exit.

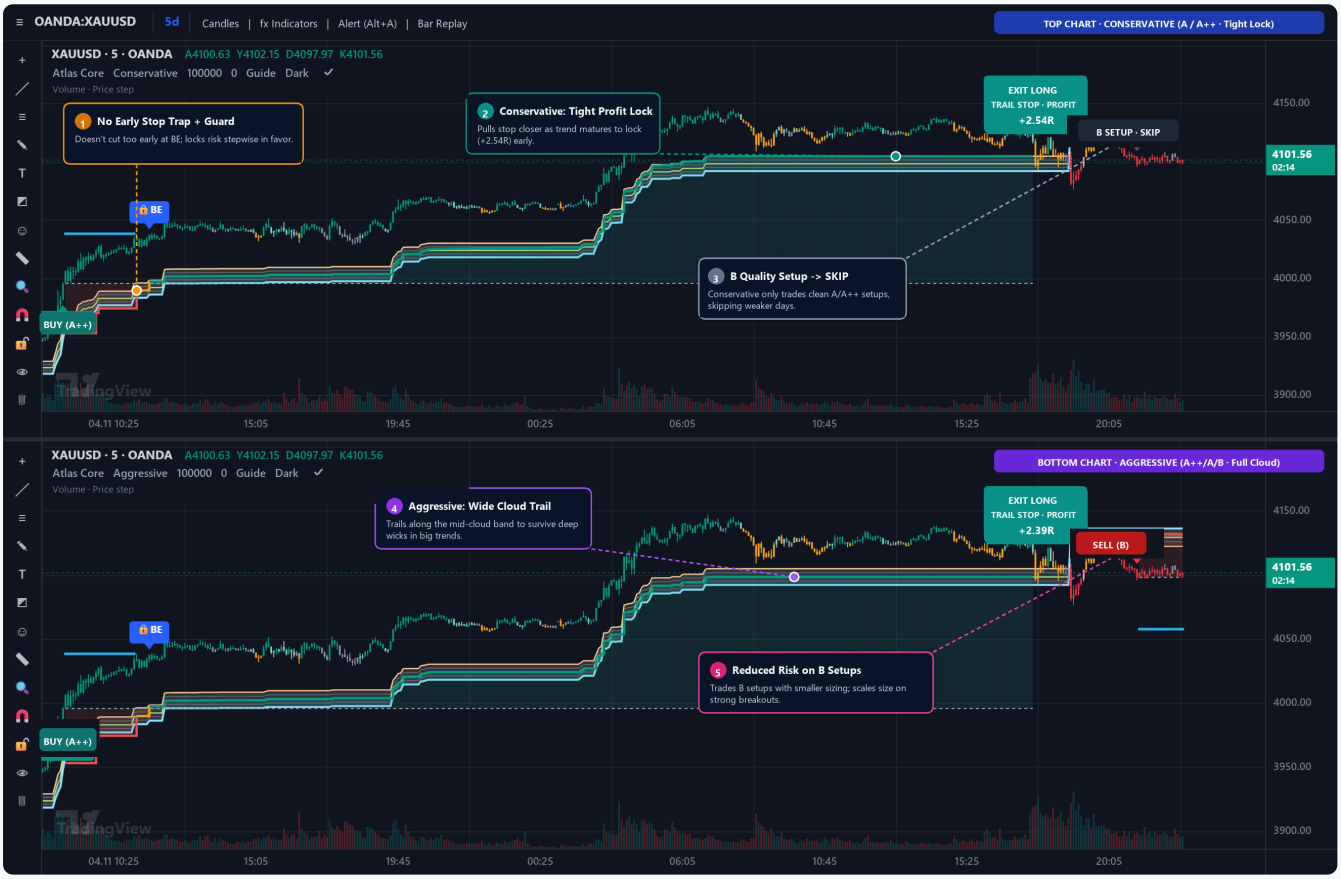
7. Guide Panel & TP1–3

Action prompt, stop distance, size, and dashed right-edge TP probability levels.

SECTION 3 Settings Menu Reference (4 Groups · 14 Inputs)

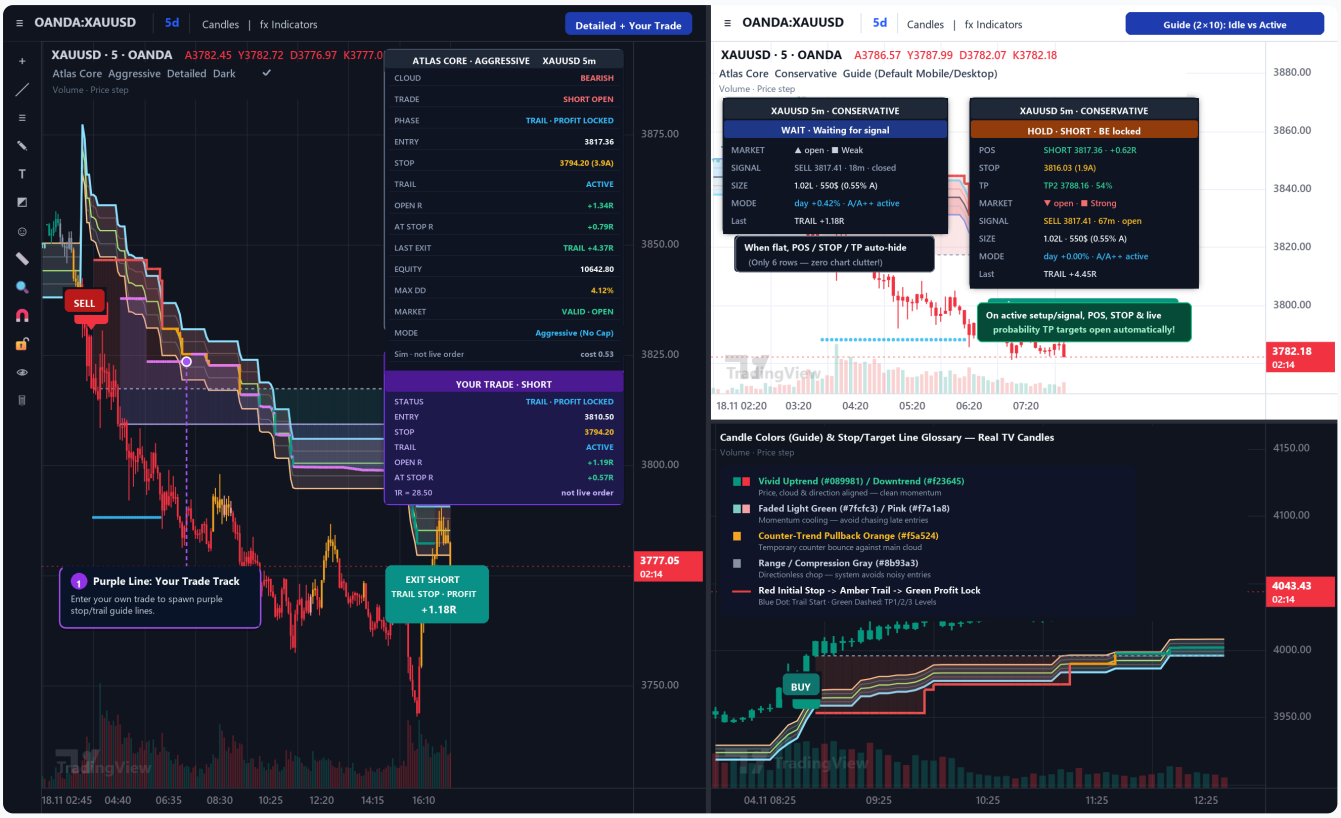
Group	Setting	Default	Purpose
1 · Mode & Risk	Operation Mode / Account ($) / Custom Risk %	`Conservative / 100000 / 0.0`	`0` auto-applies `0.55%` (Conservative) or `1.50%` (Aggressive).
2 · Appearance	Panel / Cloud / SL-TP Lines / Candle Colors	`Guide / Light / On / Guide`	Toggle Guide vs Detailed panel, Light vs Dark cloud, visual lines & 4-state candles.
3 · Alerts	Entry-Exit / Stop Move / Target Info Alerts	`On / On / Off`	Enable entry/exit, `SL MOVE → price` updates, and optional TP1–3 info pings.
4 · My Trade	Direction / Entry Time / Entry Price / Initial SL	`None / Time / 0.0 / 0.0`	Attach discretionary trades to Atlas trailing stops & alerts; reset to `None` when closed.

SECTION 4 Dual Modes Comparison



Visual 2 — Conservative (Top: A/A++ + Tight Lock) vs Aggressive (Bottom: A++/A/B + Wide Cloud Trail)

SECTION 5 Top-Right Panels & Color Glossary



Visual 3 — Detailed + Your Trade Card (Left), Guide Idle vs Active (Top-Right), Color Glossary (Bottom-Right)

Guide Action Badges

- **WAIT:** Wait / chop / guard pause
- **ENTRY:** Confirmed; enter on open
- **HOLD:** Open or BE-locked
- **TRAIL:** Update broker SL price
- **EXIT:** Flip/reverse; close on open

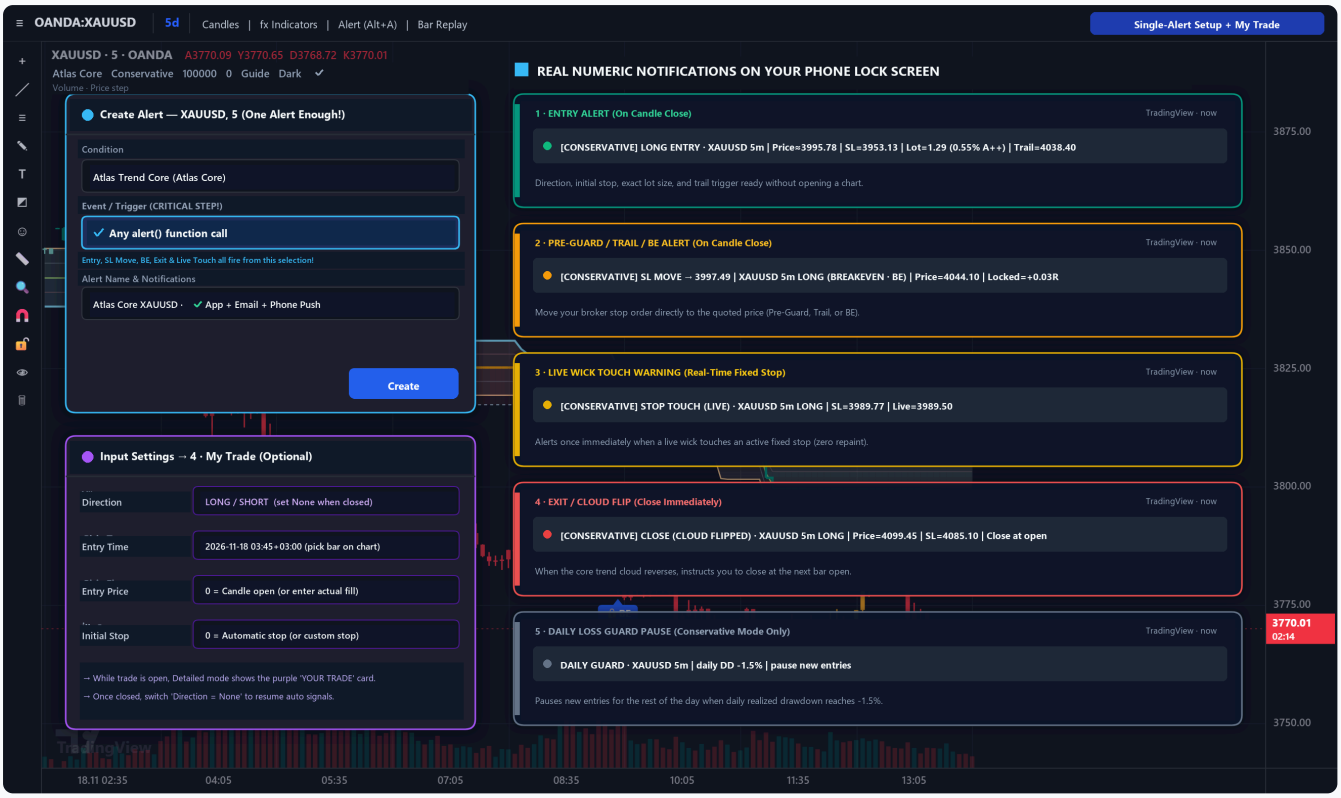
Detailed Metrics

- **OPEN R / AT STOP R:** Live vs locked min R
- **EQUITY / MAX DD:** Fixed $10k history baseline
- **YOUR TRADE:** Purple manual trade card

4 Candle Colors

- **Vivid Green/Red:** Aligned momentum
- **Light Green/Pink:** Cooling trend
- **Orange (#f5a524):** Counter-bounce
- **Gray (#8b93a3):** Sideways chop

SECTION 6–7 Single-Alert Notifications, Manual Track & Daily Checklist



Visual 4 — Single-Alert Setup, Optional My Trade Inputs, and All 5 Real Lock-Screen Notifications

5-Step Pre-Trade Checklist

1. **Check Panel (MARKET & MODE):** Confirm market open, candles aligned, and daily guard inactive.
2. **Wait for Candle Close:** Never enter mid-candle; act only on confirmed `LONG/SHORT ENTRY`.
3. **Enter Exact Alert Values:** Apply the quoted `Lot` and `SL` price into your broker immediately.
4. **Trail Patiently:** Only update stop in favor as `SL MOVE → price` alerts arrive.
5. **Let System Exit:** Wait for `TRAIL STOP`, `REVERSE SIGNAL`, or `CLOUD FLIP` (reset `Direction = None` after manual trades).

Important Notice: Atlas Trend Core is an analytical decision-support tool, not investment advice, and does not guarantee profits. Reference simulation values rely on fixed assumptions; live broker spread, commissions, slippage, and swaps affect actual outcomes.
